

Install COMODO SSL in cloud site.

- Generate CSR from any open source site without www. (i.e. <https://csrgenerator.com/>)
- Copy CSR and Private Key.
- Apply for SSL using above CSR.
- Once you receive SSL certificate files, Go to configure SSL in liquidweb. If it not allow you to enter private key, Go to CSR generator and remove CSR.
- Enter content of domain_name.crt file in Certificate Key.
- Enter private key from above generated CSR with Private key.
- In intermediate certificate, enter content as below:
 - 1 COMODORSADomainValidationSecureServerCA.crt
 - 2 COMODORSAAddTrustCA.crt
 - 3 AddTrustExternalCARoot.crt
- Click Save.
