Restore Azure SQL Database to On Premise SQL Server

- Login to Azure and select the database.
- On Upper Tab, click on Export and give required details.

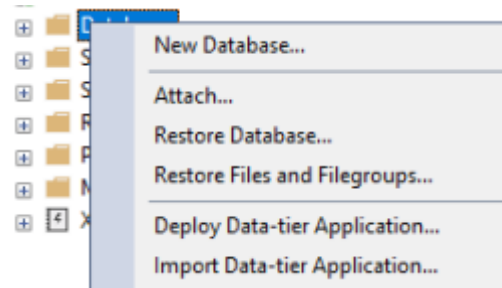

- 
- Check the Activity Log if Export process completed or not.
- Go to Storage Account -> Data Storage -> Containers and select your container.
- Check on Exported BacPac file and click Download in options.

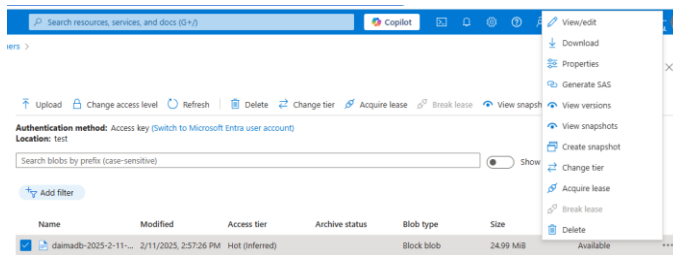

- 
- On your On Premise SQL server, do login and right click on Database.
- Click on Import Data-tier Application.

- 
- Select location of bacpac file and give Database name if required, and finish the wizard
