FORCING A SECURE CONNECTION (SSL) USING .HTACCESS IN CLOUD SITES

If your Cloud Sites uses an SSL, you can make everyone visit the https (secure) site, even if they type "http" in the URL. The way to do this is by editing your .htaccess file. Read about .htaccess before trying the rule samples below.

Remember to replace "YOURDOMAIN" with your actual domain name (site URL).

#Force SSL on entire site

RewriteEngine On

RewriteBase /

RewriteCond %{ENV:HTTPS} !on [NC]

RewriteRule ^(.*)$ https://YOURDOMAIN/$1 [R,L]
