FORCING A SECURE CONNECTION (SSL) USING WEB.CONFIG IN CLOUD SITES

Once you've determined the IIS Rewrite Module is available for your site, you can write the script to force SSL on all pages on your site. An example of the script is below.

```xml
<? xml version="1.0" encoding="UTF-8"?>
<configuration>
<system.webServer>
 <rewrite>
  <rules>
   <rule name="Redirect to HTTPS" stopProcessing="true">
    <match url=".*"/>
    <conditions>
     <add input="{HTTP_CLUSTER_HTTPS}" pattern="^on$" negate="true"/>
     <add input="{HTTP_CLUSTER_HTTPS}" pattern=".+" negate="true"/>
    </conditions>
    <action type="Redirect" url="https://{HTTP_HOST}{SCRIPT_NAME}" redirectType="SeeOther"/>
   </rule>
  </rules>
 </rewrite>
</system.webServer>
</configuration>
```
